                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a ligand of less than 6 kD that binds to a polypeptide containing the sequence GlyTyTGINFOHISGLYGLY (A) or an analogue that is the retro-inverso isomer of (A). The sequence A is an octapeptide motif from the prion protein (PrP). The ligands are identified by binding assays with the peptide (A) or peptides containing (A). The ligands are used for detecting prion proteins (or prions) in biological or environmental samples, e.g. for diagnosis, also for removing them from samples, for treating or retarding development of prion-associated diseases, specially (Treutzfeldt-Jakob diseases (in latrogenic, new variant, familial or sporadic forms), but also cerstmann-Straussler-Scheinker disease, familial insomnia,
              Isolated polynucleotide encoding bone marrow derived polypeptides useful for treating, e.g., Parkinson's, Alzheimer's, cancer, arth Crohn's disease, and inflammatory bowel disease
                                                                                                                                                                                                    07-MAR-2000; 2000US-0519705

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel human bone marrow polynucleotides and copypeptides. The polypeptides of the invention may exhibit various activities e.g. cytokine and cell proliferation/differentiation, compared to the polynucleotides are gulation and immune stimulation/compared to detect bone marrow cells, for treating, e.g., Parkinson's conservation of the invention may compared to detect bone marrow cells, for treating, e.g., Parkinson's conservation such as HIV, malaria and fungal infections, cancer, autoimmune considerations such as HIV, malaria and fungal infections, cancer, autoimmune considerations, arthritis, Crohn's disease, inflammatory bowel disease, and disorders, arthritis, Crohn's disease, inflammatory bowel disease, and considerations arthritis, crohn's disease, and are provided as markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers and as probes to hybridise and discover novel, related DNA sequences. The polypuctude may also be used in assays to determine biological activity, to raise antibodies or illicit an immune response and as a constitution of the invention sequence is a human bone marrow derived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                   δÃ
                                                                     B
                                                                                                                                                                                                        The invention relates to human diagnostic and therapeutic (dithp)
CC polynucleotides and their associated polypeptides (DITHP polypeptides).
CC The sequences of the invention are used in the treatment and diagnosis of CC cell proliferative disorders (e.g. atherosclerosis, cirrhosis), cancers
CC cervix, kidney, lung, ovary, pancreas, prostate, skin, spleen, testis or CC thymus), autoimmune/inflammatory disorders (e.g. asthma, broachitis, psoriasis, osteoporosis), viral infections, bacterial infections, fungal infections, parasitic infections, developmental disorders (e.g. anaemia, cepilepsy), seizure disorders (e.g. cerebral palsy, spina bifida), CC endocrine disorders (e.g. thrombosis, aneurysm), metabolic disorders (e.g. obesity, diabetes), neurological disorders (e.g. stroke, amyotrophic lateral sclerosis, multiple sclerosis), gastrointestinal CC amyotropic dystrophy, catatonia, peripheral neuropathy). Sequences (e.g. myotonic dystrophy, catatonia, peripheral neuropathy). Sequences CC (e.g. myotonic dystrophy, catatonia, peripheral neuropathy).
                                                                                                                                        Matches
                                                                                                                                                     Query Match

                 The invention relates to human diagnostic and therapeutic (dithp) polynucleotides and their associated polypeptides (DITHP polypeptides). The sequences of the invention are used in the treatment and diagnosis of cell proliferative disorders (e.g. atherosclerosis, cirrbosis), cancers (e.g. tumours of the adrenal gland, bone, bone marrow, brain, breast, cervix, kidney, lung, ovary, pancreas, prostate, skin, spleen, testis or thymus), autoimmune/inflammatory disorders (e.g. asthma, bronchitis, psoriasis, osteoporosis), viral infections, bacterial infections, fungal infections, parasitic infections, developmental disorders (e.g. anaemia, epilepsy), seizure disorders (e.g. cerebral palsy, spina bifida), endocrine disorders (e.g. thrombosis, aneurysm), metabolic disorders (e.g. obesity, diabetes), neurological disorders (e.g. stroke, amyotrophic lateral sclerosis, multiple sclerosis), gastrointestinal disorders (e.g. stroke, amyotrophic lateral sclerosis, multiple sclerosis), gastrointestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Momiyama

CC for identifying expressed genes. (I) is useful in gene therapy techniques (II) (II) is useful for generating antibodies against it, detecting or cyling (II) is useful for generating antibodies against it, detecting or cyling a polypeptide in tissue, as molecular weight markers and as CC among the supplement. (II) and its binding partners are useful in medical cyling of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations. CC responsible for genetic disorders or other traits to assess biodiversity amino acid sequences of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed consecution, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 20; SEQ ID No 59394; 103pp; English.

                                                                                                                                                                                                                              (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mappping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutatio responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 20; SEQ ID No 60640; 103pp; English
